

INFOTAINMENT DISPLAY WALL

NEW!

ULTRA FLAT

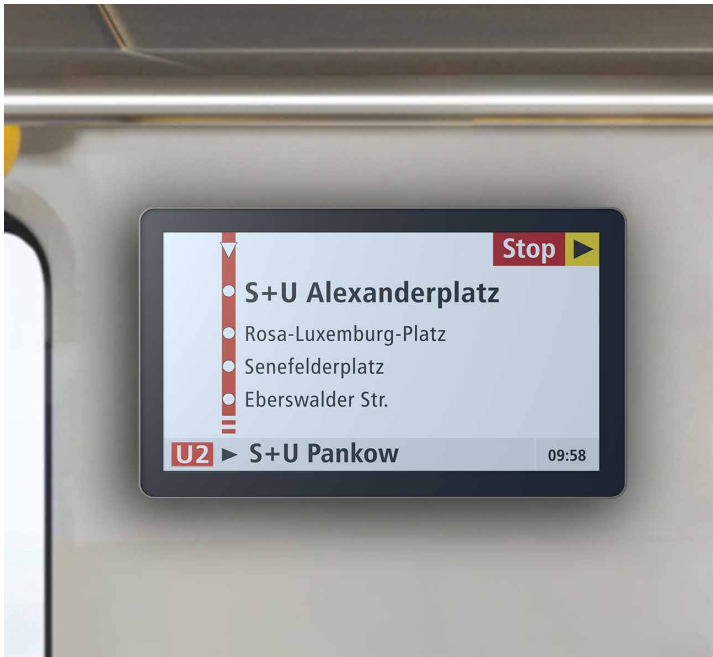

AND CAN BE INTEGRATED ALMOST EVERYWHERE

Infotainment Display Wall is only 30 mm deep.

THE NEW SUPER THIN TFT DISPLAYS

- Easy wall mounting in super thin chic design
- Excellent picture quality at the highest level
- As an addition to existing systems or part of a complete system

Thanks to the small installation depth of 30 mm and the integrated electronics, simple mounting is possible, e.g. on the side walls.

MAXIMUM FLEXIBILITY IN INTERIOR DESIGN

With an installation depth of only 30mm, this display is the ideal solution when space is at a premium. Because the ultra-flat design offers you extensive freedom of integration. The technology behind it is called Optical Bonding and can do even more: The contrast is increased and disturbing reflections are minimized, which significantly improves readability no matter from which viewing angle.

Bonding also optimizes thermal management and makes the panels less susceptible to impact and vandalism. Like all of our TFT displays, this model features automatic brightness adjustment, is completely maintenance-free, and offers extensive data and interface compatibility.

So if you're looking for extremely flexible, economical displays: you've found them.

INFOTAINMENT DISPLAY WALL 24"

Technology	TFT/LCD
Color Depth	True Colour (16.7 million colors)
